90 to 100% passing rate.

**NEW QUESTION:** 1You administer two Microsoft SQL Server 2014 servers named ProdSrv1 and ProdSrv2. ProdSrv1 is configured as a Distributor. Both servers are configured to use the Windows NT Service virtual accounts for all SQL Services. You are configuring snapshot replication from ProdSrv1 to ProdSrv2 by using ProdSrv2 as a pull subscriber. The distribution agent on ProdSrv2 regularly fails, displaying the following error message: "Cannot access the file. Operating system error code 5 (Access is denied)." You need to configure the distribution agent by granting only the minimum required access to all accounts. What should you do? **A.** Configure the Subscriber to use a Windows domain account. Grant READ access for the domain account to the ReplData share on ProdSrv1. **B.** Configure the SQL

Server Agent service to run under a Windows domain account. Configure the Subscriber to use the SQL Server Agent service account. Grant FULL CONTROL access for the domain account to the ReplData share on ProdSrv1.**C.** Configure the SQL Server Agent service to run under the Local System account. Configure the Subscriber to use the SQL Server Agent service account.**D.** Configure the Subscriber to use the Local System account.  
**Answer: A**Explanation:ExplanationConfirm that distribution agent has read privileges, full control access is not required, to the folder in question.References:

**NEW QUESTION: 3** Refer to the exhibit. The server port connected to the NPV edge switch does not come online. Which action should fix the problem?**A.** Move all the ports into VLAN 99.**B.** Move all the ports into VLAN 1.**C.** Move the NP ports on the NPV edge and the F ports on the NPIV into the same VSAN 99.**D.** Move all the ports into VSAN 99.**E.** Move the NP ports on the NPV edge and the F ports on the NPIV in the default VSAN 1.**Answer: C**

**NEW QUESTION: 4** Verifying the integrity of data submitted to a computer program at or during run-time, with the intent of preventing the malicious exploitation of unintentional effects in the structure of the code, is BEST described as which of the following?**A.** Input validation**B.** Application hardening**C.** Fuzzing**D.** Output sanitization**Answer: A**Explanation:Input validation is a defensive technique intended to mitigate against possible user input attacks, such as buffer overflows and fuzzing. Input validation checks every user input submitted to the application before processing that input. The check could be a length, a character type, a language type, or a domain.Incorrect Answers: A. Output sanitization, which is an example of secure output handling is primarily associated with preventing Cross-site Scripting (XSS) vulnerabilities in web sites.C. Hardening is the process of securing a system by reducing its surface of vulnerability. Reducing the surface of vulnerability typically

includes removing unnecessary functions and features, removing unnecessary usernames or logins and disabling unnecessary services. D. Fuzzing is a software testing technique that involves providing invalid, unexpected, or random data to as inputs to a computer program. The program is then monitored for exceptions such as crashes, or failed validation, or memory leaks.
