Some of you want to change your life from getting VMware 1V0-21.20PSE certification.

NEW QUESTION: 1

ExamKiller has three separate departments and each department has their own AWS accounts. The HR department has created a file sharing site where all the on roll employees' data is uploaded. The Admin department uploads data about the employee presence in the office to their DB hosted in the VPC. The Finance department needs to access data from the HR department to know the on roll employees to calculate the salary based on the number of days that an employee is present in the office.

How can ExamKiller setup this scenario?

- A.** Setup VPC peering for the VPCs of Admin and Finance.
- B.** It is not possible to configure VPC peering since each department has a separate AWS account.
- C.** Setup VPC peering for the VPCs of Admin and HR
- D.** Setup VPC peering for the VPCs of Finance and HR as well as between the VPCs of Finance and Admin.

Answer: D

Explanation:

A Virtual Private Cloud (VPC) is a virtual network dedicated to the user's AWS account. It enables the user to launch AWS resources into a virtual network that the

user has defined. A VPC peering connection allows the user to route traffic between the peer VPCs using private IP addresses as if they are a part of the same network. This is helpful when one VPC from the same or different AWS account wants to connect with resources of the other VPC.

NEW QUESTION: 2

Drag and Drop Question

Drag and drop the valid tunnel modes from the left into the Valid Column on the right. Order does not matter and not all options are used.

Answer:

Explanation:

NEW QUESTION: 3

During a new desktop refresh, all hosts are hardened at the OS level before deployment to comply with policy. Six months later, the company is audited for compliance to regulations. The audit discovers that 40 percent of the desktops do not meet requirements. Which of the following is the MOST likely cause of the noncompliance?

- A. 40 percent of the devices use full disk encryption.
- B. The desktop applications were configured with the default username and password.
- C. The devices are being modified and settings are being overridden in production.
- D. The patch management system is causing the devices to be noncompliant after issuing the latest patches.

Answer: C
