A number of different decision-making styles can be used in a team environment. When quality and acceptance are both important, which of the following styles should be used?

- A. Coin flip
- B. Consultation
- C. Consensus
- D. Command

Answer: B

Explanation/Reference:

Explanation:

Project managers tend to use four basic decision styles: command, consultation, consensus, and coin flip or random. If acceptance and quality are both important, the consultation style is preferred. It allows for some involvement of team members but allows project managers to maintain control over the final decision. In this style, team members are free to express their opinions, but the project manager makes the final decision.

NEW QUESTION: 3

Which accounting notices are used to send a failed authentication attempt record to a AAA server?

(Choose two.)

- A. stop-record
- B. start-stop
- C. stop-only
- D. stop

Answer: B,C

Explanation:

```
aaa accounting { auth-proxy | system | network | exec |  
connection | commands level | dot1x } { default | list- name |  
guarantee-first } [ vrf vrf-name ] { start-stop | stop-only |  
none } [broadcast] { radius | group group-name } + stop-only:
```

Sends a stop accounting record for all cases including authentication failures regardless of whether the aaa accounting send stop-record authentication failure command is configured. + stop-record: Generates stop records for a specified event.

For minimal accounting, include the stop-only keyword to send a "stop" accounting record for all cases including authentication failures. For more accounting, you can include the start-stop keyword, so that RADIUS or TACACS+ sends a "start" accounting notice at the beginning of the requested process and a "stop" accounting notice at the end of the process.

View the Exhibit and examine the structure in the EMPLOYEES tables.

Evaluate the following SQL statement:

```
SELECT employee_id, department_id
FROM employees
WHERE department_id= 50 ORDER BY department_id
UNION
SELECT employee_id, department_id
FROM employees
WHERE department_id= 90
UNION
SELECT employee_id, department_id
FROM employees
WHERE department_id= 10;
```

What would be the outcome of the above SQL statement?

- A.** The statement would not execute because the ORDER BY clause should appear only at the end of the SQL statement, that is, in the last SELECT statement.
- B.** The statement would execute successfully and display all the rows in the ascending order of DEPARTMENT_ID.
- C.** The statement would execute successfully but it will ignore the ORDER BY clause and display the rows in random order.
- D.** The statement would not execute because the positional notation instead of the column name should be used with the ORDER BY clause.
