**NEW QUESTION: 1**

You are solving a classification task.

The dataset is imbalanced.

You need to select an Azure Machine Learning Studio module to improve the classification accuracy.

Which module should you use?

- A. Filter Based Feature Selection
- B. Permutation Feature Importance
- C. Synthetic Minority Oversampling Technique (SMOTE)
- D. Fisher Linear Discriminant Analysis.

**Answer: C**

Explanation:

Explanation

Use the SMOTE module in Azure Machine Learning Studio (classic) to increase the number of underrepresented cases in a dataset used for machine learning. SMOTE is a better way of increasing the number of rare cases than simply duplicating existing cases.

You connect the SMOTE module to a dataset that is imbalanced. There are many reasons why a dataset might be imbalanced: the category you are targeting might be very rare in the population, or the data might simply be difficult to collect. Typically, you use SMOTE when the class you want to analyze is under-represented.

Reference:

<https://docs.microsoft.com/en-us/azure/machine-learning/studio-module-reference/smote>

**NEW QUESTION: 2**

RADIUS is a protocol used for authentication, authorization, and accounting (AAA) for users who are using network services. Which of the following is a valid RADIUS attribute name?
