#### **NEW QUESTION: 1**

Your customer asks you about the Performance Pack. You explain to him that a Performance Pack is a software acceleration product which improves the performance of the Security Gateway. You may enable or disable this acceleration by either:

1) the command. cpconfig 2) the command. fwaccel on|off

What is the difference between these two commands?

- A.** The fwaccel command determines the default setting. The command cpconfig can dynamically change the setting, but after the reboot it reverts to the default setting.
- B.** The command cpconfig works on the Security Platform only. The command fwaccel can be used on all platforms.
- C.** Both commands function identically.
- D.** The cpconfig command enables acceleration. The command fwaccel can dynamically change the setting, but after the reboot it reverts to the default setting.

**Answer: D**
