Answer: C

**NEW QUESTION: 2**

A customer is struggling with how to support application delivery to its highly mobile sales force. There are two Windows applications that need to be delivered, which could present a challenge. Both applications use a local copy of the central database and the applications are frequently being updated.

During assessments and user interviews, the sales personnel indicated that they frequently use these two applications while traveling in areas with poor connectivity. The sales people rarely connect to the company network. Pushing out updates using a traditional deployment system is therefore difficult.

Which solution from VMware would solve the customer's situation?

- A. Package the applications using ThinApp and manage delivery and updates using VMware Identity Manager.
- B. Package the applications as an App Volumes Appstack. Manage delivery and updates off the Appstack using VMware Identity Manager.
- C. Package the application using ThinApp for isolation and publish them to users using Horizon 7. Place the ThinApp packages on a network share for central and easy updates.
- D. Install the applications on RDS Hosts and publish them using Horizon 7. Since installed centrally, management of the applications will now be possible using traditional methods.

**Answer: B**

**NEW QUESTION: 3**

A 2-node N8500 clustered NAS engine is a 4 U enclosure. The heartbeat links between the two nodes are set up based on the internal PCIe channels.

- A. FALSE
- B. TRUE

**Answer: A**

**NEW QUESTION: 4**

A customer is migrating an application to AWS. The application is a 4 U enclosure. The heartbeat links between the two nodes are set up based on the internal PCIe channels.

- A. EC2
- B. EC2

C. EC2 instance type, instance type

D. EC2 instance type, instance type

**Answer: B**

Explanation:
