Answer: B

NEW QUESTION: 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com.

You need to identify which server is the schema master.

Solution: You open Active Directory Domains and Trusts, right-click Active Directory Domains and Trust in the console tree, and then click Does this meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:

Explanation

You need to use the Schema snap-in to find the schema master. The Schema snap-in is not installed by default but can be installed by using Schmmgmt.dll.
