Explanation:

(A) FHT should be monitored continuously with an induction of labor; this is an accepted standard of care.

(B) The physician should be notified, but this is not the first intervention the nurse should do. (C) The standard of care for an induction according to the Association of Women's Health, Obstetric, and Neonatal Nurses and American College of Obstetrics and Gynecology is that contractions should not exceed 60 seconds in an induction. Inductions should simulate

normal labor; 70-second contractions during the latent phase (3 cm) are not the norm. The next contractions can be longer and increase risks to the mother and fetus. (D) Contractions lasting 60-90 seconds during transition are typical; this provides a good distractor. The nurse needs to be knowledgeable of the phases and stages of labor.
