**NEW QUESTION:** 1What are the three rules for Shared Members in ASO?**A.** A Multiple Hierarchy Enabled dimension can have shared members.**B.** The alternate hierarchy has shared members that refer to nonshared members of previous hierarchies in the outline.**C.** When a hierarchy is tagged Multiple Hierarchies Enabled, it must be store.**D.** The shared members roll up according to a different hierarchy from the nonshared members to which they refer.**Answer: A,B,DE**Explanation: Explanation/Reference:Shared member hierarchy is also an alternate hierarchy. All shared member refers to stored members of outline (C). In aggregate storage application only multiple hierarchies can have shared members. (A) Stored hierarchy has only addition as consolidation operator. You can use the stored

hierarchy type where aggregation is the only mathematical requirement. If you have some shared member in hierarchy then use multiple hierarchy. Incorrect answers: B: An outline dimension in an ASO database can have any number of members and these members can only be set as either stored members or dynamic members. They can even have both of the hierarchies. In order to set the dimension to have both types of hierarchies, you need to enable Multiple Hierarchies Enabled.

**NEW QUESTION: 2** A. Option C B. Option A C. Option B D. Option D  
**Answer: D**

**NEW QUESTION: 3** Regarding the description of the BGP state machine, the error is: A. In the Idle state, BGP rejects any incoming connection requests and is the initial state of BGP. B. The status of both BGP peers must be OpenConfirm. The BGP neighbor relationship can be established. The two parties exchange routing information through Update packets. C. In the Active state, BGP will attempt to establish a TCP connection, which is the intermediate state of BGP. D. In the Established state, BGP peers can exchange Update packets, Route-refresh packets, Keepalive packets, and Notification packets. **Answer: A**
