NEW QUESTION: 3
What is the BEST way to ensure that an intruder who successfully penetrates a network will be detected before significant damage is inflicted?
A. Perform periodic penetration testing
B. Establish minimum security baselines
C. Install a honeypot on the network
D. Implement vendor default settings
Answer: C
Explanation:
Honeypots attract hackers away from sensitive systems and files. Since honeypots are closely monitored, the intrusion is more likely to be detected before significant damage is inflicted. Security baselines will only provide assurance that each platform meets minimum criteria. Penetration testing is not as effective and can only be performed sporadically. Vendor default settings are not effective.
