**Answer: A**

Explanation:

The user accounts are synced from the on-premise Active Directory to the Microsoft Azure Active Directory (Azure AD). Therefore, the city attribute must be changed in the on-premise Active Directory.

You can modify certain attributes of multiple user accounts simultaneously by selecting them in Active Directory Administrative Center or Active Directory Users and Computers, right clicking then selecting Properties.

The other three options all suggest modifying the city attribute of the users in the Azure Active Directory which is incorrect.

**NEW QUESTION: 2**

According to discover routes and route calculation method to distinguish between distance vector protocol concerns ().

- A.** The next hop address specified by hand
- B.** whether the aggregation routing outgoing interface port
- C.** the number of hops to the destination address
- D.** link bandwidth resource information

**Answer: C**

**NEW QUESTION: 3**

You work for a company which uses SQL Server 2008. You are the administrator of the company database and in charge of three SQL Server 2008 instances. All the instances run on their independent server. The three instances are respectively named InstanceA, InstanceB, and InstanceC. Between InstanceA and InstanceB, you configure a mirroring mission-critical database. InstanceA currently acts as the Principal and InstanceC acts as the witness. You intend to apply a patch to both servers as soon as possible, the patch needs to restart the server. You must make sure that the database is online on the partner that currently does not apply the patch and during this time the database does not failover to the other partner. So what action should you perform to achieve this goal?

- A.** First, you should apply the patch to the server that runs InstanceB. Second you failover the mirroring session manually. At last apply the patch to the server that runs InstanceA
- B.** First, you should remove the mirroring session. Second you apply the patch to the server that runs InstanceB. Third, you should apply the patch to the server that runs InstanceC. At last re-establish the mirroring session.
- C.** First, you should stop the mirroring session. Second you apply the patch to the server that runs InstanceB. Third, you should resume the mirroring session. Fourth, you should manually failover the mirroring session. At last, you should apply the patch to the server that runs InstanceC.
- D.** First, you should apply the patch to the server that runs InstanceC. Second you apply the patch to the server that runs InstanceA.

**Answer: C**
