NEW QUESTION: 2

You configure a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a single Search service Application that has two index servers.

Currently, SharePoint users are able to obtain search results that include content from an external business partner's website. The authentication mechanism for the website is changing from Windows integrated authentication to client certificate authentication.

You need to ensure that SharePoint will continue to include content from the external business partner's website in search results.

What should you do?

- A. Add a new search scope at the site administration level. Add a scope rule that uses the Content Source rule type.
- B. Add a new crawl rule and specify the path where the rule will Apply. In the Crawl Configuration section, select the Exclude all items in this path option.
- C. Add a new index partition and distribute the existing index across the two index servers.
- D. Add a new content source and specify its start address. Add a crawl schedule, and initiate a full crawl.
- E. Add a new search scope at the service Application level. Add a scope rule that uses the Web Address rule type.
- F. Add a second Search service Application and distribute the indexed content across the two index servers.
- G. Add a new crawl rule and specify the path where the rule will Apply. In the Crawl Configuration section, select the Include all items in this path option.
- H. Add a new federated search location. In the Restrictions and Credentials Information section, select the Use restriction: Only allowed sites can use this location option.

Answer: G

Explanation:

Modify the permissions on the content or create a new crawl rule that uses alternate credentials to crawl the content. You can use the New-SPEnterpriseSearchCrawlRule cmdlet to add a crawl rule for crawling items on a specified path with alternate credentials.
