NEW QUESTION: 1

What is the most common Cisco Discovery Protocol version 1 attack?

- A. VLAN hopping
- B. CAM-table overflow
- C. MAC-address spoofing
- D. Denial of Service

Answer: D

NEW QUESTION: 2

Which file contains information needed for the security auditing settings?

- A. /etc/audit/audit.rules
- B. /etc/security/audit.conf
- C. /nasmcd/var/emcsupport/audit.conf
- D. /nas/var/emcsupport/audit.rules

Answer: A

NEW QUESTION: 3

DRAG DROP

You are the administrator of a SharePoint farm. The search index for the farm contains approximately 10 million items. Performance reports indicate that search queries have high latency times and content crawls are slow. You add a new SharePoint server to the farm.

You need to configure the new server to add a new index component to the search topology.

Which four actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Answer:

Explanation:

Explanation:

Box 1: Start the search service instance

Box 2: Clone the topology

Box 3: Add an index component and an index partition

Box 4: Activate the topology.

Note:

*Manage search components in SharePoint Server 2013

Start a search service instance on a server Retrieve the active search topology Clone the active search topology Add a search component Remove a search component Move a search component Activate a search topology

*To make any changes to the search topology in a search installation that has items in the search index, you first have to create a new topology object. You modify this new topology object, a clone of the active topology, by adding or removing search components. After you have made the changes to the clone topology object, you make the clone the active topology.

*(incorrect)

You add an index replica to the search topology to achieve fault tolerance for an existing index partition.
