Answer: F Explanation: Explanation/Reference: If you're developing an anonymously accessible SharePoint website, especially an internet-facing one, you may have noticed that you're SharePoint Form pages are also accessible to anonymous users. For example `http://SERVER/_layouts/viewlsts.aspx`, `_vti_bin` web services etc. Typically we don't want this, so how do you prevent anonymous users from accessing these pages? The following steps will help you to do it. This feature is known as lock down feature which is by default enabled for publishing sites. To enable this feature first remove all anonymous access from the site. Then open command prompt and go to the folder `C:\Program Files\Common Files\Microsoft Shared\Web Server Extensions\14\BIN` First check whether the feature is activated or not; you can use the command below to check it `get-spfeature -site http://url` If `ViewFormPagesLockDown` is listed, it's

enabled. If not listed you have to enable it with the command below
To activate the Activate Feature: stsadm -o activatefeature -url -filename ViewFormPagesLockDown\feature.xml
