NEW QUESTION: 2You have three servers named Server1, Server2, and Server3 that run Windows Server 2016. On all three servers, Windows Firewall is configured to allow ICMP traffic. Server2 has two network adapters named NIC1 and NIC2. Your network is configured as shown in the exhibit. (Click the Exhibit button.) The parameters for NIC2 on Server1 are shown in the following output. Which ping request will result in a reply from the destination host?
A. From Server1, ping 172.16.0.1
B. From Server2, ping 192.168.15.1
C. From Server3, ping 192.168.15.1
D. From Server1, ping 172.16.0.35
Answer: B

NEW QUESTION: 3Which option describes a service managed by a cloud operator that supports databases without assuming traditional administration functions?
A. Infrastructure as a Service
B. SQL as a Service
C. Database as a Service
D. PlatformDB as a Service
Answer: CExplanation:
http://public.dhe.ibm.com/partnerworld/pub/certify/study_guide_c2030_284.pdfpage: 13
SUBTASK(S):1.16.1. A Database-as-a-Service (DBaaS) is a service that is managed by a cloud operator (public or private) that supports applications, without the application team assuming responsibility for traditional database administration functions.

NEW QUESTION: 4What are two reasons to define static peers in EIGRP? (Choose two.)
A. Back-level peers require static definition for successful connection.
B. Security requirements do not allow dynamic learning of neighbors.
C. The link between peers requires unicast packets.
D. The link between peers requires multicast packets.
Answer: B, CExplanation: There are two ways we can create EIGRP neighbor relationships: + Use "network" command. This is the more popular way to create EIGRP neighbor relationships. That router will check which interfaces whose IP addresses belong to the and turn EIGRP on that interface. EIGRP messages are sent via multicast packets. + Use "neighbor" command. The interface(n) that has this command applied no longer send or receive EIGRP multicast packets. EIGRP messages are sent via unicast. The router only accepts EIGRP packets from peers that are explicitly configured with a neighbor statement. Consequently, any messages coming from routers without a corresponding neighbor statement are discarded. This helps prevent the insertion of unauthorized routing peers -> A and D are correct.
