NEW QUESTION: 1Which one is a constructed type?**A.** enumerated**B.** sequence**C.** string**D.** any**Answer: B**

NEW QUESTION: 2You use the Task.Run() method to launch a long-running data processing operation. The data processing operation often fails in times of heavy network congestion. If the data processing operation fails, a second operation must clean up any results of the first operation. You need to ensure that the second operation is invoked only if the data processing operation throws an unhandled exception. What should you do?**A.** Create a task inside the existing Task.Run() method by using the AttachedToParent option.**B.** Create a task by calling the Task.ContinueWith() method**C.** Examine the Task.Status property immediately after the call to the Task.Run() method.**D.** Create a TaskCompletionSource<T> object and call the TrySetException() method of the object.**Answer: B**

NEW QUESTION: 3You are planning on hosting a web application on AWS. You create an EC2 Instance in a public subnet. This instance needs to connect to an EC2 Instance that will host an Oracle database. Which of the following steps should be followed to ensure a secure setup is in place? Select 2

answers. Please select: **A**. Create a database security group and ensure the web security group to allowed incoming access **B**. Ensure the database security group allows incoming traffic from 0.0.0.0/0 **C**. Place the EC2 Instance with the Oracle database in the same public subnet as the Web server for faster communication **D**. Place the EC2 Instance with the Oracle database in a separate private subnet **Answer: A, D** Explanation: The best secure option is to place the database in a private subnet. The below diagram from the AWS Documentation shows this setup. Also ensure that access is not allowed from all sources but just from the web servers. Option A is invalid because databases should not be placed in the public subnet Option D is invalid because the database security group should not allow traffic from the internet For more information on this type of setup, please refer to the below URL:

<https://docs.aws.amazon.com/AmazonVPC/latest/UserGuideA/PCScenario2>. The correct answers are: Place the EC2 Instance with the Oracle database in a separate private subnet Create a database security group and ensure the web security group to allowed incoming access Submit your Feedback/Queries to our Experts
