NEW QUESTION: 2

You have an Exchange Server 2013 organization that contains the servers configured as shown in the following table.

All mailbox servers are members of a database availability group (DAG) named DAG1. DAG1 has Datacenter Activation Coordination (DAC) mode enabled. The data center in Dallas experiences a power failure, causing quorum to be lost. You need to mount the databases in the data center in Houston. Which command should you run first?

- A.** Stop-DatabaseAvailabilityGroup -Identity DAG1 -ActiveDirectorySite Exchange-Site
- B.** Stop-Service -DisplayName ClusSvc -Force.
- C.** Restore-DatabaseAvailabilityGroup -Identity DAG1 -ActiveDirectorySite Exchange-Site -AlternateWitnessServer -AlternateWitnessDirectory D:\DAG1
- D.** Stop-DatabaseAvailabilityGroup -Identity DAG1 -MailboxServer EX1 -ConfigurationOnly.

Answer: D

Explanation:

First step: Terminating a Partially Failed Datacenter When the DAG is in DAC mode, the specific actions to terminate any surviving DAG members in the primary datacenter are as follows: The DAG members in the primary datacenter must be marked as stopped in the primary datacenter. Stopped is a state of Active Manager that prevents databases from mounting, and Active Manager on each server in the failed datacenter is put into this state by using the Stop-DatabaseAvailabilityGroup cmdlet.
