NEW QUESTION: 3How does a fabric access point fit in the network?**A.** It is in FlexConnect mode and must be connected directly to the fabric edge switch.**B.** It is in local mode and must be connected directly to the fabric edge switch.**C.** It is in FlexConnect mode and must be connected directly to the fabric border node.**D.** It is in local mode and must be connected directly to the fabric border node.**Answer: B****Explanation:**Fabric mode APs continue to support the same wireless media services that traditional APs support; apply AVC, quality of service (QoS), and other wireless policies; and establish the CAPWAP control plane to the fabric WLC. Fabric APs join as local-mode APs and must be directly connected to the fabric edge node switch to enable fabric registration events, including RLOC assignment via the fabric WLC. The fabric edge nodes use CDP to recognize APs as special wired hosts, applying special port configurations and assigning the APs to a unique overlay network within a common EID space across a fabric. The assignment allows management simplification by using a single subnet to cover the AP infrastructure at a fabric site.
