Microsoft SQL Server2012
Sales
Contoso
SELECT * FROM Sales WHERE
Server01
Microsoft SQL Server2012
Sales
Contoso
SELECT * FROM Sales WHERE
```

**Answer: E**

**NEW QUESTION: 3** You have an Azure subscription that contains the public load balancers shown in the following table. You plan to create six virtual machines and to load balancer requests to the virtual machines. Each load balancer will load balance three virtual machines. You need to create the virtual machines for the planned solution. How should you create the virtual machines? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

**Answer:** Explanation: Explanation Box 1: be created in the same availability set or virtual machine scale set. The Basic tier is quite restrictive. A load balancer is restricted to a single availability set, virtual machine scale set, or a single machine. Box 2: be connected to the same virtual network The Standard tier can span any virtual machine in a single virtual network, including blends of scale sets, availability sets, and machines.
