ACME Catering Services is using esxtop to troubleshoot a performance problem with one of their ESXi 5.x hosts. Host disconnections from vCenter Server as well as sluggish performance when performing tasks on the host have been observed. Based on the output in the exhibit, how many vCPU's have been assigned to FileServer01?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

NEW QUESTION: 3

Figure 1 shows the configuration of an Azure Logic App. The Logic App is triggered by a tweet containing the hashtag #ACME. The Logic App sends an HTTP GET request to the FileServer01 endpoint. The response from the FileServer01 endpoint is returned to the Logic App. The Logic App then sends an email to the user. The email contains the content of the response from the FileServer01 endpoint.

- D. The Logic App sends an HTTP GET request to the FileServer01 endpoint.
- E. Azure Machine Learning Service
- F. The Logic App sends an email to the user.

Answer: A,C

Explanation:

Explanation

C: You can filter your tweets using Azure Logic Apps & Content Moderation. Azure Content Moderator is a cognitive service that checks text, image, and video content for material that is potentially offensive, risky, or otherwise undesirable. When this material is found, the service applies appropriate labels (flags) to the content.

Your app can then handle flagged content in order to comply with regulations or maintain the intended environment for users.

D: You can write an application so that when a user tweets with configured Twitter Hashtag, Logic App gets triggered and passed to Cognitive Text Analytics Connector for detecting the sentiments of the tweet (text). If the tweeted text is found to

be harsh or with bad or abusive language, the tweet can be handled appropriately.

NEW QUESTION: 4

5 GHz spectrum, some of the channels used by 802.11 are subject to Dynamic Frequency Selection (DFS) requirements. This is due to our clients coexistence with other RF technologies such as Maritime, Aviation and Weather RADAR. Dynamic Frequency Selection (DFS) is the process of detecting radar signals that must be protected against interference from 5.0 GHz (802.11a/h) radios, and upon detection switching the operating frequency of the 5.0 GHz (802.11a/h) radio to one that is not interfering with the radar systems.

A.

Although DFS helps reduce interference with radar systems but "DFS channels" refer to the 5GHz channels that require DFS check. In other words, DFS channels are channels that may interfere with radar signal. Therefore we should disable these DFS channels -> Answer C is correct.

B.

UNII-2 (5.250-5.350 GHz and 5.470-5.725 GHz) which contains channels 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136, and 140 are permitted in the United States, but
