NEW QUESTION: 1

B. The ACK method is part of the INVITE transaction.
C. The ACK method is an exception in RFC 3261.

3261.
Answer: B

NEW QUESTION: 2

RTA (config)#router rip
RTA(config-router)#network 10.0.0.0
RTA(config-router)#distribute-list 44 in interface BRIO

```
RTA(config-router)#exit
RTA(config)#access-list 44 deny 172.16.1.0 0.0.0.255
RTA(config)#access-list 44 permit any
```

A. Option C
B. Option A
C. Option E
D. Option B
E. Option D
Answer: A,C
Explanation:
Distribute list are used to filter routing updates and they are based on access lists. In this case, an access list of 44 was created to deny the route from network 172.16.1.0/24 so this route will not be entered into the routing table of RTA. But the route from RTW can be entered because it is not filtered by the access list A and B are not correct because the distribute list is applied to the inbound direction of interface BRI0 so outgoing routing updated will not be filtered.
Distribute list just filters routing updates so user traffic from network 172.16.1.0 will not be denied.
