Many people always have no courage to take the first step even though they always say that I want to success, Therefore, the exam EMC D-PDC-DY-23 certification becomes increasingly essential for those computer personnel.

Now in such a Internet so developed society, choosing online **D-PDC-DY-23 Test Score Report** training is a very common phenomenon, We have a good command to the examination questions, so you can trust us.

This product will destroy any other EMC Certification study [Reliable 1z1-808 Exam Sims](#) guide or pathetic EMC Certification practice test from the competitors' EMC Certification dumps, The candidates study with the actual material that they see in the exam [Reliable AWS-Solutions-Architect-Associate-KR Dumps Questions](#) and because of that it clears up their concepts and they know the answers to all the questions already.

If we failed to deliver the results as advertised, then we will return Composite Test D-PDC-DY-23 Price your money, We respect the privacy of our customers, once the deal having finished, your personal information will be concealed.

We provide latest and updated question answers for D-PDC-DY-23 exam for preparation, Don't you want to make a splendid achievement in your career, There is a useful and reliable D-PDC-DY-23 study material for you.

NEW QUESTION: 1Refer to the exhibit.How would you confirm on R1 that load balancing is actually occurring on default-network (0.0.0.0)?**A.** Load balancing does not occur over default networks; the second route will only be used for failover.**B.** Use the traceroute command to an address that is not explicitly in the routing table.**C.** Use ping and the show ip route command to confirm the timers for each default network resets to 0**D.** Use an extended ping along with repeated show ip route commands to confirm the gateway of last resort address toggles back and forth.**Answer: B**Explanation:Explanation/Reference:Explanation: The simplest method to test load balancing is to use the "traceroute" command. If load balancing is working correctly, we will see different paths to reach the destination each time we use that command.Unknown address will be routed via the

default-network 0.0.0.0 so we must use an address that is not explicitly in the routing table.

NEW QUESTION: 2 You use Amazon Cloud Watch as your primary monitoring system for your web application. After a recent software deployment, your users are getting Intermittent 500 Internal Server Errors when using the web application. You want to create a Cloud Watch alarm, and notify an on-call engineer when these occur. How can you accomplish this using AWS services? Choose three answers from the options given below.

A. Use Amazon Simple Notification Service to notify an on-call engineer when a CloudWatch alarm is triggered.

B. Deploy your web application as an AWS Elastic Beanstalk application. Use the default Elastic Beanstalk CloudWatch metrics to capture 500 Internal Server Errors. Set a CloudWatch alarm on that metric.

C. Use Amazon Simple Email Service to notify an on-call engineer when a CloudWatch alarm is triggered.

D. Create a CloudWatch Logs group and define metric filters that capture 500 Internal Server Errors. Set a CloudWatch alarm on that metric.

E. Install a CloudWatch Logs Agent on your servers to stream web application logs to CloudWatch.

Answer: A, D, E

Explanation: You can use Cloud Watch Logs to monitor applications and systems using log data. Cloud Watch Logs uses your log data for monitoring; so, no code changes are required. For example, you can monitor application logs for specific literal terms (such as "NullPointerException") or count the number of occurrences of a literal term at a particular position in log data (such as "404" status codes in an Apache access log). When the term you are searching for is found, Cloud Watch Logs reports the data to a CloudWatch metric that you specify. Log data is encrypted while in transit and while it is at rest. For more information on CloudWatch logs please refer to the below link: <http://docs>
