And that is one of the reasons why our DA0-001 study materials
are so popular for we give more favourable prices and more
considerable service for our customers.

We Promise we will very happy to answer your question with more
patience and enthusiasm and try our utmost to help you on the
DA0-001 training questions.

NEW QUESTION: 1

Refer to the screenshot in Exhibit 5. There are two interfaces
in Port Channel. Assuming you are creating this Port Channel on
a Cisco UCS 6248, how many additional interfaces can be added
to the Port Channel?
A. 0
B. 1
C. 2
D. 3
E. 4
Answer: E
Explanation:

An uplink Ethernet port channel allows you to group several physical uplink Ethernet ports (link aggregation) to create one logical Ethernet link to provide fault-tolerance and highspeed connectivity. In Cisco UCS Manager, you create a port channel first and then add uplink Ethernet ports to the port channel. You can add up to eight uplink Ethernet ports to a port channel.

Answer: C

NEW QUESTION: 4
A user has created a VPC with CIDR 20.0.0.0/16 with only a private subnet and VPN connection using the VPC wizard. The user wants to connect to the instance in a private subnet over SSH. How should the user define the security rule for SSH?
A. Allow Inbound traffic on port 80 and 22 to allow the user to connect to a private subnet over the Internet
B. Allow Inbound traffic on port 22 from the user's network
C. The user has to create an instance in EC2 Classic with an elastic IP and configure the security group of a private subnet to allow SSH from that elastic IP
D. The user can connect to a instance in a private subnet using the NAT instance
Answer: B
Explanation:
The usercan create subnets as per the requirement within a VPC. If the user wants to connect VPC from his own data center, the user can setup a case with a VPN only subnet (private. which uses VPN access to connect with his data center. When the user has configured this setup with Wizard, all network connections to the instances in the subnet will come from his data center. The user has to configure the security group of the private subnet which allows the inbound traffic on SSH (port 22. from the data center's network range.
