NEW QUESTION: 1

Refer to the exhibit. A help desk ticket has been entered for the wireless infrastructure.

A wireless client is not able to connect at IEEE 802.11n rates. Which option allows for connectivity?

- A. Set WMM mode to Optional or Required.
- B. Set Quality of Service (QoS) to Platinum.
- C. Set 7920 AP CAC to Enabled.
- D. Set Quality of Service (QoS) to Silver.

Answer: A

NEW QUESTION: 2

Scenario

Refer to the topology. Your company has decided to connect the main office with three other remote branch offices using point-to-point serial links.

You are required to troubleshoot and resolve OSPF neighbor adjacency issues between the main office and the routers located in the remote branch offices.

Use appropriate show commands to troubleshoot the issues and answer all four questions.

Instructions

An OSPF neighbor adjacency is not formed between R3 in the main office and R5 in the Branch2 office.

What is causing the problem?

- A. There is a PPP authentication issue; a password mismatch.
- B. There is a missing network command in the OSPF process on R5.
- C. There is an area ID mismatch.
- D. There is an OSPF hello and dead interval mismatch.

Answer: D

Explanation:

Explanation/Reference:

Explanation:

Here are the relevant parts of the router configs:

Continue checking their connected interfaces with the "show running-config" command:

The only difference we can see here is the line "ip ospf hello-interval 50" on R3. This command sets the number of seconds R3 waits before sending the next hello packet out this interface. In this case after configuring this command, R3 will send hello packets to R5 every 50 seconds. But the default value of hello-interval is 10 seconds and R5 is using it. Therefore we can think of a hello interval mismatch problem here. You can verify with the "show ip ospf interface <interface>" command on each router.

So we can see both hello and dead interval are mismatched because the dead interval always four times the value of hello interval, unless you manually configure the dead interval (with the ip ospf dead-interval <seconds> command).

NEW QUESTION: 3

-- Exhibit -

A vSphere administrator created a Virtual SAN and a relevant virtual machine Storage Policy. The administrator is unable to select this virtual machine Storage Policy when creating a new virtual machine.

Based on the exhibit, why is the administrator unable to select this virtual machine Storage Policy?

- A. The vCenter Server license does not support virtual machine Storage Policies.
- B. The ESXi Host license does not support virtual machine Storage Policies.
- C. The administrator did not enable the virtual machine Storage Policy per compute resource.
- D. The administrator did not create a storage policy for the datastore selected for the virtual machine.

Answer: C
