NEW QUESTION: 1What is the capability of Data.com Clean? Choose 3 answers**A.** Individual records can be manually compared side-by-side with matched Data.com records and updated field-by-field.**B.** Accounts, contact, and lead records can be selected from a list and cleaned all at once.**C.** Accounts must be cleaned before cleaning contacts, but leads may be cleaned either before or after '-'cleaning accounts**D.** Data.com can be configured to run automated clean jobs to flag field differences and automatically fill ublank fields**Answer: A,B,D**

NEW QUESTION: 2A company creates an API and makes it accessible on an Azure website. External partners use the API occasionally. The website uses the Standard web hosting plan.

Partners report that the first API call in a sequence of API calls occasionally takes longer than expected to run. Subsequent API calls consistently perform as expected. You need to ensure that all API calls perform consistently. What should you do?
A. Configure the website to use the Basic web hosting plan
B. Enable Always On support.
C. Add a trigger to the web.config file for the website that causes the website to recycle periodically.
D. Configure the website to automatically scale.
Answer: B
Explanation: By default, web apps are unloaded if they are idle for some period of time. This lets the system conserve resources. In Basic or Standard mode, you can enable Always On to keep the app loaded all the time. If your app runs continuous WebJobs or runs WebJobs triggered using a CRON expression, you should enable Always On, or the web jobs may not run reliably.
