**NEW QUESTION: 2**
An 802.11b PPDU's preamble consists of two fields and can collectively be considered
"long" or "short" by the 802.11b standard. Which of the following is true regarding the PLCP preamble?
**A.** An 802.11b access point that supports both long and short preambles may allow stations that are using different preamble lengths to communicate through it simultaneously.
**B.** 802.11g stations associating to 802.11b access points must use the DSSS preamble length specified by the access point.
**C.** When short preambles are being used, the Sync and SFD fields both consist of 16 bits.
Only access points have configurable preamble lengths.
**D.** A short preamble uses a Sync field of 40 bits, and stations and access points must have matching preamble lengths in order to communicate.
**E.** Long and short preamble lengths are both variable depending on the modulation in use on the network, and access points always inform stations of the preamble length in use on the network.
**F.** A long preamble uses a Sync field of 128 bits, and both stations and access points may have configurable preamble lengths.
**Answer: B,F**

**NEW QUESTION: 3**
Testlet: Woodgrove Bank
You need to recommend a solution for managing the shared folders that meets the company's technical requirements.
What should you include in the recommendation?
Case Study Title (Case Study): COMPANY OVERVIEW Overview
Woodgrove Bank is an international financial organization.
Physical Location
The company has a main office and multiple branch offices.
EXISTING ENVIRONMENT Active Directory Environment
The network contains one Active Directory forest. A separate domain exists for each office.
Network Infrastructure
All offices have domain controllers that are configured as DNS servers. All client computers are configured to connect to the DNS servers in their respective office only.
The main office has the following servers and client computers:
One Windows Server Update Services (WSUS) server.
Client computers that run either Windows XP Service Pack 3 (SP3) or Windows 7.
Ten file servers host multiple shared folders. The file servers run either Windows Server 2003 or
Windows Server 2008 R2.
One domain-based Distributed File System (DFS) namespace that has two replicas. The DFS servers
run Windows Server 2008 R2. The DFS namespace is configured to

use Windows 2000 Server mode. Each branch office has a WAN link to the main office. The WAN links are highly saturated. Each office has a dedicated high-speed Internet connection.
All of the client computers in the branch offices run Windows 7.

User Problems
Users report that it is difficult to find the shared folders on the network.

REQUIREMENTS Planned Changes
Woodgrove Bank plans to implement the following changes:
Deploy a new application named App1 on each client computer. App1 has a Windows Installer package and is compatible with Windows XP, Windows Vista, and Windows 7.
Designate a user in each office to manage the address information of the user accounts in that office.
Deploy a new branch office named Branch22 that has the following servers: One file server named Server1 &amp; Two domain controllers named DC10 and DC11 that are configured as DNS servers.

Technical Requirements
Woodgrove Bank must meet the following technical requirements:
Minimize hardware and software costs, whenever possible.
Encrypt all DNS replication traffic between the DNS servers.
Ensure that users in the branch offices can access the DFS targets if a WAN link fails.
Ensure that users can only view the list of DFS targets to which they are assigned permissions.
Minimize the amount of network traffic between the main office and the branch offices, whenever possible.
Minimize the amount of name resolution traffic from the branch offices to the DNS servers in the main office.
Ensure that the administrators in the main office manage all Windows update approvals and all
computer groups.
Manage all of the share permissions and the folder permissions for the file servers from a single
management console.
Ensure that if a file on a file server is deleted accidentally, users can revert to a previous version of the file without administrator intervention.
Ensure that administrators are notified by e-mail each time a user successfully copies a file that has an .avi extension to one of the file servers.

Security Requirements
Woodgrove Bank must meet the following security requirements:
Access rights and user rights must be minimized.
The Guest account must be disabled on all servers.
Internet Information Services (IIS) must only be installed on authorized servers.
**A.** Computer Management
**B.** Share and Storage Management
**C.** Storage Explorer
**D.** File Server Resource Manager (FSRM)

**Answer: A**
Explanation:
Explanation
Explanation/Reference:
As 10 file servers hosting multiple shared folders run either
Windows Server 2003 or Windows Server 2008 R2, Computer
Management is the preferred console instead of Share and
Storage Management.
