NEW QUESTION: 4DRAG DROPYou manage an application hosted on cloud services. The development team creates a new version of the application. The updated application has been packaged and stored in an Azure Storage account.You have the following requirements:
* Deploy the latest version of the application to production with the least amount of downtime.
* Ensure that the updated application can be tested prior to deploying to the Production site.
* Ensure that the original version of the application can be restored until the new version is verified.
Which four steps should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.**Answer:**
Explanation:ExplanationOnce you have uploaded the compiled package to Azure Storage, you would create a new staging deployment.You can then provide the URL to the development team. Once approved, you would promote the new deployment to production by performing a VIP swap. You can then stop the instance of the old production deployment and keep it at hand in the staging slot.
