NEW QUESTION: 2
A nurse is preparing a nursing care plan for a six-year-old patient who is in the acute phase of sickle cell vaso-occlusive crisis. Which of the following interventions should be included in the plan?
A. Fluid restriction of 1L per day
B. Administration of analgesia as prescribed
C. Encourage patient to increase caloric intake
D. Ambulation for at least six hours a day
Answer: B
Explanation:
Intervention that should be included in the plan is administration of analgesia as prescribed.
The general objective in the treatment of a sickle cell crisis is bed rest, antibiotics for any infection, electrolyte replacement, analgesics, hydration, and blood replacement.

Answer:
Explanation:

Explanation

Box 1: Threat modeling
Threat modeling's motto should be, "The earlier the better, but not too late and never ignore." Box 2: Static code analysis
Validation in the CI/CD begins before the developer commits his or her code. Static code analysis tools in the IDE provide the first line of defense to help ensure that security vulnerabilities are not introduced into the CI/CD process.
Box 3: Penetration testing
Once your code quality is verified, and the application is deployed to a lower environment like development or QA, the process should verify that there are not any security vulnerabilities in the running application. This can be accomplished by executing automated penetration test against the running application to scan it for vulnerabilities.
