Adding an extra 500M swap partition to your system, this swap partition should mount automatically when the system starts up. Don't remove and modify the existing swap partitions on your

system.

Answer:

Explanation:

see explanation below.

Explanation

```
fdisk -cu /dev/vda// in the way of expanding the partition,
```

```
don't make main partition partx -a /dev/vda mkswap /dev/vdax
```

```
swapon /dev/vdax swapon -s vi /etc/fstab
```

```
/dev/vdaxswapswapdefaults0 0
```

```
mount -a
```

NEW QUESTION: 2

When given a project requirement for RTO to be satisfied, VMware HA can be used with admission control enabled.

A. True

B. False

Answer: A

Explanation:

An admission control policy tells VMware HA how to calculate the resources it needs to reserve for a cluster. It uses a combination of memory and CPU reservation configuration or, if no configuration exists, a default low reservation. Chapter 4, The Importance of vMotion, VMware HA, and Fault Tolerance

NEW QUESTION: 3

In biometrics, "one-to-many" search against database of stored biometric images is done in:

A. Identity-based access control

B. Identification

C. Identities

D. Authentication

Answer: B

Explanation:

Explanation/Reference:

Explanation:

A biometric system executes a one-to-many comparison against a biometric database in attempt to establish the identity of an unknown user in identification mode. If the comparison of the biometric sample to a template in the database falls within a threshold previously set, identifying the individual will succeed.

Incorrect Answers:

A: In authentication mode, the biometric system performs a one-to-one comparison of a captured biometric with a specific template stored in a biometric database in order to confirm the individual is the person they claim to be.

C: Identities refer to who users are, not a mode used in biometrics.

D: An identity-based access control is a type of Discretionary

Access Control (DAC) that is based on an individual's identity.
