NEW QUESTION: 2A. Option DB. Option AC. Option CD. Option B

Answer: B,C

NEW QUESTION: 3Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 R2 and has the Network Policy Server role service installed. You need to enable trace logging for Network Policy Server (NPS) on Server1. Which tool should you use?
A. The netsh.exe command
B. The Network Policy Server console
C. The tracert.exe command
D. The Server Manager console

Answer: A
Explanation: NPS trace logging files You can use log files on servers running Network Policy Server (NPS) and NAP client computers to help troubleshoot NAP problems. Log files can provide the detailed information required for troubleshooting complex problems. You can capture detailed information in log files on servers running NPS by enabling remote access tracing. The Remote Access service does not need to be installed or running to use remote access tracing. When you enable tracing on a server running NPS, several log files are created in %windir%\tracing. The following log files contain helpful information about NAP: IASNAP. LOG: Contains detailed information about NAP processes, NPS authentication, and NPS authorization. IASSAM. LOG: Contains detailed information about user authentication and authorization. Membership in the local Administrators group, or equivalent, is the minimum required to enable tracing. Review details about using the appropriate accounts and group memberships at Local and Domain Default Groups (<http://go.microsoft.com/fwlink/?LinkId=83477>). To create tracing log files on a server running NPS Open a command line as an administrator. Type netsh ras set tr * en. Reproduce the scenario that you are troubleshooting. Type netsh ras set tr * dis. Close the command prompt window. Reference: <http://technet.microsoft.com/en-us/library/dd348461%28v=ws.10%29.aspx>-----
