Through our practice material, the students can **HPE2-B04 Official Cert Guide** recognize their positive and weak areas, and that gives them chance to improve, HPE Solutions with VMware APP (Online Test Engine) Version supports any electronic **HPE2-B04 Official Cert Guide** equipment which is easy to carry, you can review on the subway or everywhere you like.

Now you can simply choose your HPE2-B04 exam from the list and be directed right to its page where you can find links to download HPE2-B04 exams, In the result, many simple jobs are substituted by machines.

NEW QUESTION: 1Assuming there is no information about the duration or each table update and the programs are running in a multitasking environment, which of the following options will best minimize the chance for deadlocks?**A.** Program A updates Table A, Table B and Table C in the specified order, and Program B updates TableC, Table B and Table A in the specified order.**B.** All programs update Table A, Table B and Table C in the same order.**C.** Programs update table A, Table B and Table C in random order.**D.** Program A updates Table A, Table B and Table C in the specified order, and Program B updates TableB, Table C

and Table A in the specified order. **Answer: B**

NEW QUESTION: 2

ALTER TABLE employees SET UNUSED COLUMN sal; **Answer: D, F** Explanation: D: GRANT is a DML operation which will cause an implicit commit. E: It is important to understand that an implicit COMMIT occurs on the database when a user exits SQL*Plus or issues a data-definition language (DDL) command such as a CREATE TABLE statement, used to create a database object, or an ALTER TABLE statement, used to alter a database object. Incorrect Answers: A: The DELETE command is data-manipulation language (DML) command and it does not complete a transaction. B: The DESCRIBE command is internal SQL*Plus command and it has nothing to do with completion a transaction. C: ROLLBACK is not used to commit or complete a transaction, it is used to undo a transaction. F: SELECT command is used to retrieve data. It does not complete a transaction.

OCPI Introduction to Oracle 9i: SQL Exam Guide, Jason Couchman, p. 281-282 Chapter 3: Advanced Data Selection in Oracle

MAX sal FROM employees WHERE department_id = 20; **Answer: D, F**

NEW QUESTION: 3
SSOB. WPAC. NTLMD. RADIUS **Answer: D** Explanation: Remote Authentication Dial-In User Service (RADIUS) could be a networking protocols, in operation on ports 1812 and 1813, that gives centralized Authentication, Authorization, and Accounting (AAA or Triple A) management for users who connect and use a network service. RADIUS was developed by American Revolutionary leader Enterprises, Inc. in 1991 as an access server authentication and accounting protocol and later brought into the net Engineering Task Force (IETF) standards. RADIUS could be a client/server protocol that runs within the application layer, and might use either protocol or UDP as transport. Network access servers, the gateways that management access to a network, sometimes contain a RADIUS consumer element that communicates with the RADIUS server. RADIUS is commonly the back-end of alternative for 802.1X authentication moreover. The RADIUS server is sometimes a background method running on a UNIX system or Microsoft Windows server.
