prep pdf.

NEW QUESTION: 1 What is the purpose of a data center?
A. to provide innovative technology resources
B. to provide maximum server availability
C. to provide cooling for servers
D. to support enterprise applications
Answer: D
Explanation: Finally, information systems are applications that directly or indirectly define business processes. Infrastructure refers to facilities and permanent components, such as hardware, operating systems, and local and network services. Data center virtualization must also support application silos if we are to maintain the support of the applications teams who have traditionally used a siloed architecture and infrastructure to ensure isolation and security within their application areas.

NEW QUESTION: 2 Digital rights management (DRM) solutions (sometimes referred to as information rights management, or IRM) often protect unauthorized distribution of what type of intellectual property?
Response: A. Copyright
B. Patents
C. Personally identifiable information (PII)
D. Trademarks
Answer: A

NEW QUESTION: 3 You need to meet the technical requirement for VM4. What should you create and configure?
A. an Azure Logic App
B. an Azure Service Bus
C. an Azure Event Hub
D. an Azure Notification Hub
Answer: C
Explanation: Scenario: Create a workflow to send an email message when the settings of VM4 are modified. You can start an automated logic app workflow when specific events happen in Azure resources or third-party resources. These resources can publish those events to an Azure event grid. In turn, the event grid pushes those events to subscribers that have queues, webhooks, or event hubs as endpoints. As a subscriber, your logic app can wait for those events from the event grid before running automated workflows to perform tasks - without you writing any code.
