NEW QUESTION: 1What happens when a new version of a plugin is loaded which adds new properties to a process' steps?**A.** The user must repair the process by using each modified step's properties editor to define the new properties.**B.** The user may define values for new properties when the process is invoked.**C.** IBM UrbanCode Deploy provides a message that the previously-defined process is obsolete and needs to be repaired.**D.** Nothing happens because the process continues to use the older versions of the process steps (the step code is embedded in the process definition).**Answer: D**Explanation:

Explanation/Reference>Note: A process step has access to properties set earlier by other steps within the process, to properties set by the application that started the component process, and to properties on the target environment and resource. Step property values become unavailable after the component process ends.References:
