NEW QUESTION: 1

Which of the following statements is most correct?

- A. If changes in the bankruptcy code make bankruptcy less costly to corporations, then this would likely reduce the debt ratio of the average corporation.
- B. All of the answers above are correct.
- C. An increase in the personal tax rate is likely to increase the debt ratio of the average corporation.
- D. A reduction in the corporate tax rate is likely to increase the debt ratio of the average corporation.
- E. None of these answers are correct.

Answer: E

Explanation:

Explanation/Reference:

Explanation:

A major reason for using debt is that interest is deductible, which lowers the effective cost of debt.

Lowering the corporate tax rate reduces the tax advantages of debt leading firms to use less debt financing. If the personal tax rate were to increase, individuals would now find interest received on corporate debt less attractive, causing firms to utilize less debt financing. An increase in the costs of bankruptcy might lead firms to use less debt in order to reduce the probability of having to incur these higher costs.

NEW QUESTION: 2

You are loading a dataset into SQL Server. The dataset contains numerous duplicates for the Artist and Song columns.

The values in the Artist column in the dataset must exactly match the values in the Artist domain in the knowledge base.

The values in the Song column in the dataset can be a close match with the values in the Song domain.

You need to use SQL Server Data Quality Services (DQS) to define a matching policy rule to identify duplicates.
