Content settings, and then click Update app.
B. From the app workspace, click Update app, configure the
Access setting, and then click Update app.
C. From the app workspace, share the dashboard.
D. From the app workspace settings, add a member.
Answer: B

NEW QUESTION: 3

Answer:
Explanation:

Explanation

Set the forest function level and the Domain functional level
both to Windows Server 2003.
Also check Domain Name (DNS) server.
Note:
* When you deploy AD DS, set the domain and forest functional
levels to the highest value that your environment can support.
This way, you can use as many AD DS features as possible. For
example, if you are sure that you will never add domain
controllers that run Windows Server 2003 to the domain or
forest, select the Windows Server 2008 functional level during
the deployment process. However, if you might retain or add
domain controllers that run Windows Server 2003, select the
Windows Server 2003 functional level.
* You can set the domain functional level to a value that is
higher than the forest functional level. For example, if the
forest functional level is Windows Server 2003, you can set the
domain functional level to Windows Server 2003or higher.
