NEW QUESTION: 3 Which of the following is a security benefit of

providing additional HVAC capacity or increased tonnage in a datacenter?**A.** Longer MTBF of hardware due to lower operating temperatures**B.** Increased availability of network services due to higher throughput**C.** Higher data integrity due to more efficient SSD cooling**D.** Longer UPS run time due to increased airflow**Answer: A****Explanation:**Explanation/Reference:Explanation: The mean time between failures (MTBF) is the measure of the anticipated incidence of failure for a system or component. This measurement determines the component's anticipated lifetime. If the MTBF of a cooling system is one year, you can anticipate that the system will last for a one-year period; this means that you should be prepared to replace or rebuild the system once a year. If the system lasts longer than the MTBF, your organization receives a bonus. MTBF is helpful in evaluating a system's reliability and life expectancy. Thus longer MTBF due to lower operating temperatures is a definite advantage
