**Answer: A**

Explanation:

[https://tacacs.net/docs/TACACS\\_Advantages.pdf](https://tacacs.net/docs/TACACS_Advantages.pdf)

The primary functional difference between RADIUS and TACACS+ is that TACACS+ separates out the Authorization functionality, where RADIUS combines both Authentication and Authorization.

<https://www.cisco.com/c/en/us/support/docs/security-vpn/remote-authentication-dial-user-service-radius/12433-32.html>

Authentication and Authorization The RADIUS server can support a variety of methods to authenticate a user. When it is provided with the username and original password given by the user, it can support PPP, PAP or CHAP, UNIX login, and other authentication mechanisms.

Typically, a user login consists of a query (Access-Request) from the NAS to the RADIUS server and a corresponding response (Access-Accept or Access-Reject) from the server. The Access-Request packet contains the username, encrypted password, NAS IP address, and port.

**NEW QUESTION: 2**

In your customer's RAID 5 array, a hard disk fails. Systems Insight Manager reports another hard disk in the same array in predictive failure mode. What is the correct procedure to fix this problem?

- A.** Replace the disk that is in predictive failure mode. When the rebuild is finished, replace the failed disk.
- B.** RAID 5 has no special procedure, because up to two disks can fail.
- C.** Replace the failed disk. When the rebuild is finished, replace the disk that is in predictive failure mode.
- D.** To save rebuild time, replace both failed disks at the same time.

**Answer: C**

**NEW QUESTION: 3**

The following SAS program is submitted:

```

%micro test(var);
%let jobs=BLACKSMITH WORDSMITH SWORDSMITH;
%let type=%index(&jobs,&var);
%put type = &type;
%mend;
%test(SMITH)
  
```

What is the value of the macro variable TYPE when the %PUT statement executes?

- A. 0
- B. 1
- C. Null
- D. 2

**Answer: A**

**NEW QUESTION: 4**

The Web Cache Communication Protocol (WCCP) is a content-routing protocol that can facilitate the redirection of traffic flows in real time. Your organization has deployed WCCP to redirect web traffic that traverses their Cisco Adaptive Security Appliances (ASAs) to their Cisco Web Security Appliances (WSAs).

The simulator will provide access to the graphical user interfaces of one Cisco ASA and one Cisco WSA that are participating in a WCCP service. Not all aspects of the GUIs are implemented in the simulator. The options that have been implemented are sufficient to determine the best answer to each of the questions that are presented.

Your task is to examine the details available in the simulated graphical user interfaces and select the best answer.

What traffic is not redirected by WCCP?

- A. Traffic sent from private address space
- B. Traffic sent from public address space
- C. Traffic destined to public address space
- D. Traffic destined to private address space

**Answer: B**

Explanation:

From the screen shot below we see the WCCP-Redirection ACL is applied, so all traffic from the Private IP space to any destination will be redirected.
