So you will get the latest NS0-527 guide torrent materials whenever you decide to take it, Our professional experts devote plenty of time and energy to developing the NetApp Certified Implementation Engineer, Data Protection update exam training.

Latest Superwszywka Certification Exam Material, Do you think **NS0-527 Test Pass4sure** whether you have the competitive advantage when you are compared with people working in the same field?

NEW QUESTION: 1

To provide security, a service provider configures various private VLANs in its backbone network infrastructure to prevent certain VLAN communication to each other. Which version of VTP supports the use of private VLANs?

- A.** Version 2
- B.** VTP does not support private VLANs

- C. Version 3
 - D. Version 1
- Answer: C**

NEW QUESTION: 2

An application hosted at the EC2 instance receives an HTTP request from ELB. The same request has an X-Forwarded-For header, which has three IP addresses. Which system's IP will be a part of this header?

- A. Load Balancer IP address.
- B. Previous Request IP address.
- C. Client IP address.
- D. All of the answers listed here.

Answer: D

Explanation:

When a user sends a request to ELB over HTTP/HTTPS, the request header log at the instance will only receive the IP of ELB. This is because ELB is the interceptor between the EC2 instance and the client request. To get the client IP, use the header X-Forwarded-For in header. The client IP address in the X-Forwarded-For request header is followed by the IP addresses of each successive proxy that passes along the request. The last IP address is the IP address that connects to the back-end application instance. e.g. if the HTTP request already has a header when it reaches the Load Balancer, the IP address from which the request came is appended at the end of the header followed by the IP address of the Load Balancer. In such cases, the X-Forwarded-For request header takes the following form: X-Forwarded-For: clientIPAddress, previousRequestIPAddress, LoadBalancerIPAddress.
