**NEW QUESTION: 3**You are evaluating the use of VMM to migrate APP1 for the sales users. You need to identify the effects of

the migration. What should you identify? **A.** The VHDs and the virtual machine configuration files will move. The sales users' access to APP1 will be interrupted. **B.** The virtual machine configuration files will move but the VHDs will remain in the original location. The sales users' access to APP1 will be interrupted. **C.** The VHDs and the virtual machine configuration files will move. The sales users will continue to have uninterrupted access to APP1. **D.** The VHDs will move but the virtual machine configuration files will remain in the original location. The sales users will continue to have uninterrupted access to APP1.

**Answer: C**

**Explanation:** Topic 3, Northwind Traders Overview

Northwind Traders is an IT services and hosting provider. Northwind Traders has two main data centers in North America. The data centers are located in the same city. The data centers connect to each other by using high-bandwidth, low-latency WAN links. Each data center connects directly to the Internet. Northwind Traders also has a remote office in Asia that connects to both of the North American data centers by using a WAN link. The Asian office has 30 multipurpose servers. Each North American data center contains two separate network segments. One network segment is used to host the internal servers of Northwind Traders. The other network segment is used for the hosted customer environments.

**Existing Environment**

**Active Directory** The network contains an Active Directory forest named northwindtraders.com. The forest contains a single domain. All servers run Windows Server 2012 R2.

**Server Environment** The network has the following technologies deployed:-----

- Service Provider Foundation
- Windows Azure Pack for Windows Server
- System Center 2012 R2 Virtual Machine Manager (VMM)
- An Active Directory Rights Management Services (AD RMS) cluster
- An Active Directory Certificate Services (AD CS) enterprise certification authority (CA)

All newly deployed servers will include the following components:---

- Dual 10-GbE Remote Direct Memory Access (RDMA)-capable network adapters
- Dual 1-GbE network adapters
- 128 GB of RAM

**Requirements**

**Business Goals** Northwind Traders will provide hosting services to two customers named Customer1 and Customer2. The network of each customer is configured as shown in the following table.

**Planned Changes** Northwind Traders plans to implement the following changes:----

- Deploy System Center 2012 R2 Operations Manager.
- Deploy Windows Server 2012 R2 iSCSI and SMB-based storage.
- Implement Hyper-V Recovery Manager to protect virtual machines.
- Deploy a certificate revocation list (CRL) distribution point (CDP) on the internal network.

For Customer 1, install server authentication certificates issued by the CA of Northwind Traders on the virtual machine in the hosting networks.

**General Requirements** Northwind Traders identifies the following requirements:-----

- Storage traffic must use dedicated adapters.
- All storage and network traffic must be load balanced.
- The amount of network traffic between the internal network and the hosting network must be minimized.
- The publication of CRLs to CDPs must be automatic.
- Each customer must use dedicated Hyper-V hosts.
- Administrative effort must be minimized, whenever possible.
- All servers and networks must be

monitored by using Operations Manager. Anonymous access to internal file shares from the hosting network must be prohibited. All Hyper-V hosts must use Cluster Shared Volume (CSV) shared storage to host virtual machines. All Hyper-V storage and network traffic must remain available if single network adapter fails. The Hyper-V hosts connected to the SMB-based storage must be able to make use of the RDMA technology. The number of servers and ports in the hosting environment to which the customer has access must be minimized.

----Customer1 Requirements Northwind Traders identifies the following requirements for Customer1: ---Customer1 must use SMB-based storage exclusively. Customer1 must use App Controller to manage hosted virtual machines. The virtual machines of Customer1 must be recoverable if a single data center fails. ---Customer1 must be able to delegate self-service roles in its hosted environment to its users. Customer1 must be able to check for the revocation of certificates issued by the CA of Northwind Traders. The users of Customer1 must be able to obtain use licenses for documents protected by the AD RMS of Northwind Traders. Certificates issued to the virtual machines of Customer1 that reside on the hosted networks must be renewed automatically.

Customer2 Requirements Northwind Traders identifies the following requirements for Customer2: ---Customer2 must use iSCSI-based storage exclusively. All of the virtual machines of Customer2 must be migrated by using a SAN transfer. None of the metadata from the virtual machines of Customer2 must be stored in Windows Azure. The network configuration of the Hyper-V hosts for Customer2 must be controlled by using logical switches. The only VMM network port profiles and classifications allowed by Customer2 must be low-bandwidth, medium-bandwidth, or high-bandwidth. - The users at Northwind Traders must be able to obtain use licenses for documents protected by the AD RMS cluster of Customer2. Customer2 plans to decommission its AD RMS cluster during the next year.
