NEW QUESTION: 1

- A. Option D
- B. Option C
- C. Option A
- D. Option B

Answer: D

Explanation:

This module describes how to configure Network Address Translation (NAT) for IP address conservation and how to configure inside and outside source addresses. This module also provides information about the benefits of configuring NAT for IP address conservation.

NAT enables private IP internetworks that use nonregistered IP addresses to connect to the Internet. NAT operates on a device, usually connecting two networks, and translates the private

(not globally unique) addresses in the internal network into legal addresses before packets are forwarded onto another network. NAT can be configured to advertise to the outside world only one address for the entire network. This ability provides additional security by effectively hiding the entire internal network behind that one address. NAT is also used at the enterprise edge to allow internal users access to the Internet and to allow Internet access to internal devices such as mail servers.

NEW QUESTION: 2

Drag and Drop Question

Drag and drop the VLAN port membership modes from the left onto the correct descriptions on the right.

Answer:

Explanation:

NEW QUESTION: 3
