NEW QUESTION: 1Which of the following IP address ranges are considered private, according to RFC 1918?Choose all that apply.**A.** 10.0.0.0 - 10.255.255.255**B.** 172.16.0.0 - 172.16.255.255**C.** 172.16.0.0 - 172.31.255.255**D.** 192.168.0.0 - 192.168.255.255**E.** 191.168.16.0 - 192.168.31.255**Answer: A,C,D**

NEW QUESTION: 2You administer an Azure solution that uses a virtual network named FabVNet. FabVNet has a single subnet named Subnet-1.You discover a high volume of network traffic among four virtual machines (VMs) that are part of Subnet-1.You need to isolate the network traffic among the four VMs. You want to achieve this goal with the least amount of downtime and impact on users.What should you do?**A.** Create a site-to-site virtual network and move the four VMs to your datacenter.**B.** Create a new subnet in the existing virtual network and move

the four VMs to the new subnet.**C.** Create a new virtual network and move the VMs to the new network.**D.** Create an availability set and associate the four VMs with that availability set.

Answer: CExplanation:Explanation/Reference:Explanation:To isolate the VMs, we could use Windows Firewall or Network Security Groups (NSG) but they're not options here.If we move the VMs to a new subnet in the same virtual network, traffic can still flow to VMs on the other subnet. We would still need additional security such as an NSG; therefore, answer A is incorrect.The answer is to create a new virtual network and move the VMs to the new network. This would provide the required isolation without the need for additional security such as an NSG.

NEW QUESTION: 3A possible breach of an organization's IT system is reported by the project manager. What is the FIRST thing the incident response manager should do?**A.** Investigate the system logs**B.** Disable the logon IDC. Validate the incident**D.** Run a port scan on the system**Answer: C**Explanation:When investigating a possible incident, it should first be validated. Running a port scan on the system, disabling the logon IDs and investigating the system logs may be required based on preliminary forensic investigation, but doing so as a first step may destroy the evidence.
