#### **NEW QUESTION: 1**

A sys admin is using server side encryption with AWS S3. Which of the below mentioned statements helps the user understand the S3 encryption functionality?

- A.** The user can use the AWS console, SDK and APIs to encrypt or decrypt the content for server side encryption with the user supplied key
- B.** The server side encryption with the user supplied key works when versioning is enabled
- C.** The user must send an AES-128 encrypted key

D. The user can upload his own encryption key to the S3 console

**Answer: B**

Explanation:

AWS S3 supports client side or server side encryption to encrypt all data at rest. The server side encryption can either have the S3 supplied AES-256 encryption key or the user can send the key along with each API call to supply his own encryption key. The encryption with the user supplied key (SSE-C. does not work with the AWS console. The S3 does not store the keys and the user has to send a key with each request. The SSE-C works when the user has enabled versioning.
