#### **NEW QUESTION: 1**

A security analyst has determined that the user interface on an embedded device is vulnerable to common SQL injections. The device is unable to be replaced, and the software cannot be upgraded. Which of the following should the security analyst recommend to add additional security to this device?

**A.** The security analyst should recommend an IDS be placed on the network segment.

**B.** The security analyst should recommend this device be

included in regular vulnerability scans.

**C.** The security analyst should recommend this device regularly export the web logs to a SIEM system.

**D.** The security analyst should recommend this device be placed behind a WAF.

**Answer: D**

### NEW QUESTION: 2

A company needs to create a daily Amazon Machine Image (AMI) of an existing Amazon Linux EC2 instance that hosts the operating system, application, and database on multiple attached Amazon Elastic Block Store (Amazon EBS) volumes. File system integrity must be maintained.

Which solution will meet these requirements?

**A.** Create an AWS Lambda function to call the CreateImage API operation with the EC2 instance ID and the reboot parameter enabled. Create a daily scheduled Amazon EventBridge (Amazon CloudWatch Events) rule that invokes the function.

**B.** Use AWS Backup to create a backup plan with a backup rule that runs daily. Assign the resource ID of the EC2 instance with the no-reboot parameter enabled.

**C.** Use AWS Backup to create a backup plan with a backup rule that runs daily. Assign the resource ID of the EC2 instance with the reboot parameter enabled.

**D.** Create an AWS Lambda function to call the CreateImage API operation with the EC2 instance ID and the no-reboot parameter enabled. Create a daily scheduled Amazon EventBridge (Amazon CloudWatch Events) rule that invokes the function.

**Answer: B**

### NEW QUESTION: 3

Microsoft  
Azure

Microsoft  
Azure

**Answer:**

Explanation:

Explanation:

Create a new Azure Data Lake Storage account with Azure Data Lake managed encryption keys For Azure services, Azure Key Vault is the recommended key storage solution and provides a common management experience across services. Keys are stored and managed in key vaults, and access to a key vault can be given to users or services. Azure Key Vault supports customer creation of keys or import of customer keys for use in customer-managed encryption key scenarios.

Note: Data Lake Storage Gen1 account Encryption Settings. There are three options:

- \* Do not enable encryption.

- \* Use keys managed by Data Lake Storage Gen1, if you want Data Lake Storage Gen1 to manage your encryption keys.

- \* Use keys from your own Key Vault. You can select an existing Azure Key Vault or create a new Key Vault. To use the keys from a Key Vault, you must assign permissions for the Data Lake Storage Gen1 account to access the Azure Key Vault.
