**NEW QUESTION: 1**A printer using multi-part forms has just had the ribbon replaced. After running a print job, the end user reports that the print is not visible on the third and fourth copies of the form. Which of the following will correct the issue?**A.** Decrease the character per minute rate**B.** Increase the character per minute rate**C.** Decrease the platen gap**D.** Increase the platen gap**Answer: C**

**NEW QUESTION: 2**Which type of analysis is used to determine the cause and degree of difference between the baseline and actual performance?**A.** Reserve analysis**B.** Variance analysis**C.** Schedule network analysis**D.** Alternative analysis**Answer: B**

**NEW QUESTION:** 3Which of the following is not a defined layer in the TCP/IP protocol model?**A.** Application layer**B.** Internet layer**C.** Network access layer**D.** Session layer**Answer: D****Explanation:**The TCP/IP reference model is the network model used in the current Internet architecture. It has its origins back in the 1960's with the grandfather of the Internet, the ARPANET. This was a research network sponsored by the Department of Defense in the United States. The reference model was named after two of its main protocols, TCP (Transmission Control Protocol) and IP (Internet Protocol). They choose to build a packet-switched network based on a connectionless internet layer. Here is a representation of it:"The TCP/IP Protocol Model is similar to the OSI model, but it defines only the following four layers instead of seven:**Application Layer.** Consists of the applications and processes that use the network.**Host-to-Host Transport Layer.** Provides end-to-end data delivery service to the Application Layer.**Internet Layer.** Defines the IP datagram and handles the routing of data across networks.**Network Access or Link Layer.** Consists of routines for accessing physical networks and the electrical connection."Pg 112 Krutz: The CISSP Prep Guide: Gold Edition.
