Answer: D

Explanation:

The command to create a 64-bit aggregate is the same aggr create command that is present in Data ONTAP 7G for aggregate creation. The aggr create command has a new flag, -B, to specify the type of aggregate to create. It takes a value of either 32 or 64 and creates the respective type of aggregate. Therefore the aggr create command with -B 64 creates a 64-bit aggregate. The aggr create command without the -B flag by default creates a 32-bit aggregate.

Here are some commands for creating different aggregate types in Data ONTAP 8.0:

Creating a 64-bit aggregate:

```
aggr create aggr_64 -B 64 5
```

Creating a 32-bit aggregate using -B flag:

```
aggr create aggr_32 -B 32 5
```

Creating a 32-bit aggregate without using -B flag:

```
aggr create default_aggr_32 5
```

Note: the man pages do not include this option in later versions of DOT because 64-bit is now the default.
