NEW QUESTION: 1 Which of the following agreement types is a non-contractual agreement between two or more parties and outlines each party's requirements and responsibilities?**A.** BPA **B.** MOU**C.** SLA**D.** ISA**Answer: B**

NEW QUESTION: 2A storage administrator wants to add as asynchronous replication session to a pair of Unity systems with an existing synchronous replication session that is operating correctly. Which configuration steps are needed?**A.** Create Replication interfaces on both systems.Modify the Replication Connection Mode.Run a Replication Connection Verify and Update operation.**B.** Create Replication Interfaces on both systems.Establish FC connectivity using the Synchronous FC Ports of each system.Run a Verify and Update operation for the Replication Connection**C.** Create Replication Interfaces on destination system.Establish FC connectivity using the Synchronous FC Ports of each system.Perform a manual Sync operation on the Asynchronous session.**D.** Create Replication Interfaces on the source system.Modify the Mode for Replication Connection.Perform a manual Sync operation on the Asynchronous session.**Answer: A**Explanation:To fully configure asynchronous replication between systems, you must do each of following: Note: To fully configure synchronous replication, you must complete each of following:

NEW QUESTION: 3 You are configuring a virtual machine (VM) that is hosted on a Windows Server 2008 R2 Hyper-V server. The VM is currently in the Running state.You need to export the VM without loss of data.What are two possible first steps that you could perform to achieve this goal?(Each correct answer presents a complete solution. Choose two.)**A.** Turn off the VM.**B.** Save the VM.**C.** Pause the VM.**D.** Shut down the VM.**Answer: B,D** Explanation:Save first, then shut down.

NEW QUESTION: 4 Which of the following types of authentication packages user credentials in a ticket?**A.** Kerberos**B.** TACACS+**C.** RADIUS**D.** LDAP**Answer: A**Explanation:The basic process of Kerberos authentication is as follows:The subject provides logon credentials.The Kerberos client system encrypts the password and transmits the protected credentials to the KDC.The KDC verifies the credentials and then creates a ticket-granting

ticket (TGT-a hashed form of the subject's password with the addition of a time stamp that indicates a valid lifetime). The TGT is encrypted and sent to the client.The client receives the TGT. At this point, the subject is an authenticated principle in the Kerberos realm.The subject requests access to resources on a network server. This causes the client to request a service ticket (ST) from the KDC.The KDC verifies that the client has a valid TGT and then issues an ST to the client. The ST includes a time stamp that indicates its valid lifetime.The client receives the ST.The client sends the ST to the network server that hosts the desired resource.The network server verifies the ST. If it's verified, it initiates a communication session with the client. From this point forward, Kerberos is no longer involved.Incorrect Answers:B. The Lightweight Directory Access Protocol (LDAP) is an open, vendor-neutral, industry standard application protocol for accessing and maintaining distributed directory information services over an Internet Protocol (IP) network.C. TACACS+ makes use of Kerberos as an authentication mechanism.D. Radius does not make use of tickets.References:Stewart, James Michael, CompTIA Security+ Review Guide, Sybex, Indianapolis, 2014, pp. 270-274.
