NEW QUESTION: 1

You need to design the system that alerts project managers to data changes in the contractor information app.

Which service should you use?

- A. Azure Notification Hub
- B. Azure Service Bus Message Queueing
- C. Azure Mobile Service
- D. Azure Queue Messaging

Answer: D

Explanation:

Explanation/Reference:

* Scenario:

/Mobile Apps: Event-triggered alerts must be pushed to mobile apps by using a custom Node.js script.

/The service level agreement (SLA) for the solution requires an uptime of 99.9%

* If you are already using Azure Storage Blobs or Tables and you start using queues, you are guaranteed 99.9% availability. If you use Blobs or Tables with Service Bus queues, you will have lower availability.

Note: Microsoft Azure supports two types of queue mechanisms: Azure Queues and Service Bus Queues.

/Azure Queues, which are part of the Azure storage infrastructure, feature a simple REST-based Get/Put/ Peek interface, providing reliable, persistent messaging within and between services.

/Service Bus queues are part of a broader Azure messaging infrastructure that supports queuing as well as publish/subscribe, Web service remoting, and integration patterns.
