These people who want to pass the 1Z0-1080-21 exam have regard the exam as the only one chance to improve themselves and make enormous progress, 1Z0-1080-21 online test engine support all web browsers, and you can use this version in your phone.

**NEW QUESTION: 1**

You have a Windows Server 2012 R2 Hyper-V environment that includes System Center 2012 R2 Virtual Machine Manager (VMM). The environment includes five physical servers. The servers are configured as follows:

You plan to use VMM to migrate physical machines to virtual machines.

You need to reconfigure the hardware on the servers to support a physical to virtual offline migration.

Which three servers should you reconfigure? Each correct answer presents part of the solution.

- A. NYC-FS
- B. NYC-DEV
- C. NYC-PR
- D. NYC-EX
- E. NYC-WEB

**Answer: A,C,D**

Explanation:

Explanation/Reference:

Explanation:

You need to find servers which CANNOT go thru P2V migration.

P2V Prerequisites in VMM

Requirements on the source machine

The physical computer to be converted must meet the following requirements:

- Must have at least 512 MB of RAM.
  - Cannot have any volumes larger than 2040 GB.
  - Must have an Advanced Configuration and Power Interface (ACPI) BIOS. Vista WinPE will not install on a non-ACPI BIOS.
  - Must be accessible by VMM and by the virtual machine host.
  - Cannot be in a perimeter network.
- > A perimeter network, which is also known as a screened subnet, is a collection of devices and subnets that are placed between an intranet and the Internet to help protect the intranet from unauthorized Internet users. The source computer for a physical-to-virtual (P2V) conversion can be in any other network topology in which the VMM management server can connect to the source machine to temporarily install an agent and can make Windows Management Instrumentation (WMI) calls to the source computer.
- The source computer should not have encrypted volumes.
- > If the source computer has encrypted volumes, an offline P2V conversion may render the computer unbootable. So based on the prerequisites, NYC-FS, NYC-EX and NYC-PR needs to be re-configured.

UPDATE:

As of System Center 2012 R2, you can no longer perform P2V conversions in VMM.

For information about how to use an earlier version of Virtual Machine Manager to mitigate this change, see the:

"How to perform a P2V in a SCVMM 2012 R2 environment blog" - <http://blogs.technet.com/b/scvmm/archive/2013/10/03/how-to-perform-a-p2v-in-a-scvmm-2012-r2-environment.aspx> Technet Reference: <http://technet.microsoft.com/en-us/library/hh427293.aspx>

### NEW QUESTION: 3

A cardiac patient is taking a ß-blocker medication. During an exercise test, you would expect

- A. A slight decrease or no effect on blood pressure compared to a test without the medication.
- B. A change in heart rate or blood pressure compared to a test without the medication.
- C. A radioisotope (e.g., Cardiolute) to be administered, because ß-blockers depress the ST segment on the resting ECG.
- D. An increase in the angina threshold compared to a test without the medication.

**Answer: D**

### NEW QUESTION: 4

Your company has a main office and a branch office.

The main office and Two The branch office

main office contains 25000 users.

The branch office contains 1800 users in each

Each office contains two IP subnets.

The company plans to deploy an Active Directory forest.

You need to recommend an Active Directory infrastructure to meet the following requirements:

(Remember these two requirements need help with & how many domain sites they need)

- Ensure that the users are authenticated by using a domain controller in their respective office.
- Minimize the amount of Active Directory replication traffic between the offices.

Select the BEST answer.

- A. Three domains and one site
- B. Two domains and one sites
- C. One domain and three sites

## D. Three domain and Three sites

### Answer: D

Explanation:

Topic 1, Fabrikam, Inc.

#### General Overview

Fabrikam, Inc, is an international pharmaceutical company that has 3,000 employees.

The company has a sales department, a marketing department, a research department, and a human resources department.

#### Physical Locations

The company has a main office, a sales office, and a manufacturing plant. The main office is located in Montreal. The sales office is located in New York. The manufacturing plant is located in Seattle.

All offices connect to each other by using a WAN link. Each office connects directly to the Internet.

#### Active Directory

The company has an Active Directory forest named fabrikam.com. The forest contains a single domain. All domain controllers run Windows Server 2008 R2.

Each office contains one DHCP server and two domain controllers. Each office is configured as an Active Directory site. The Seattle site contains three separate subnets. Each subnet has its own DHCP scope. All of the client computers in the research department are located on a subnet named Research in the Seattle site.

All of the sites connect to each other by using the DEFAULTIPSITELINK site link.

#### System Center 2012

The company has Microsoft System Center 2012 Configuration Manager and Microsoft System Center 2012 Operations Manager deployed. Configuration Manager has a single primary site that contains one site server. All of the site system roles are located in the Montreal site.

Operations Manager has a single management server located in the Montreal site.

#### Applications

An application named Appl is used by different groups in the Seattle site. Appl is composed of a web application and a web service that are hosted on separate virtual machines.

#### Problem Statements

The company identifies the following network issues:

\*Network administrators report that it takes a long time to deploy applications to the client computers in the Seattle and New York sites by using Configuration Manager.

\*During the last few months, network administrators discovered several DNS cache attacks.

#### Business Goals

The company wants to minimize hardware and software purchasing costs.

#### Planned Changes

The company plans to implement the following changes:

\*Deploy Microsoft System Center 2012 Virtual Machine Manager

(VMM) to manage a host group named HostGroup1 in the Montreal site and a host group named HostGroup2 on one of the subnets in the Seattle site.

\*Implement a line-of-business application named App2 for use on the Research subnet. App2 will be installed on a read-only domain controller (RODC).

\*Deploy all new domain controllers by using domain controller cloning.

\*Virtualize all new domain controllers.

\*Implement Microsoft System Center 2012 Endpoint Protection on all client computers.

\*In the Seattle site, configure a separate Active Directory site for the research department.

\*Implement a highly available remote access server solution in the New York site.

\*Upgrade System Center 2012 to System Center 2012 Service Pack 1 (SP1).

\*Upgrade all member servers to Windows Server 2012.

#### Technical Requirements

The company identifies the following technical requirements:

\*Enable reporting on Endpoint Protection from a central point.

\*Protect the DNS server cache from malicious overwrites.

\*Ensure that internal DNS clients only accept DNS responses for fabrikam.com from authorized DNS servers.

\*Ensure that the client computers request signed data from the DNS servers.

\*Ensure that remote users can access network resources over a VPN if one of the remote access servers in the New York site fails.

\*Provide high-availability for HostGroup1 by using a clustered storage space that supports the failure of two disks without losing data.

\*Implement an Active Directory site for the Research subnet. All Active Directory replication to the new site must occur within the Seattle office only.

\*Ensure that research users can log on locally to the server that hosts App2 to install drivers and hard disks, and to manage updates.

\*Ensure that virtual machines hosted in HostGroup2 receive IP addresses from the DHCP server in the Seattle site. The IP addresses for the virtual machines will be from a different range than the IP addresses used for physical machines.

\*Ensure that virtualization administrators can remotely manage all of the Hyper-V hosts by using the Remote Server Administration Tools (RSAT) on their local computer.

Virtualization administrators must be able to move virtual machines by using live migration.

\*Ensure that the users in the Seattle site can create new instances of App1 by using the Virtual Machine Manager Self-Service Portal (VMMSSP). Each new instance of App1 will contain two virtual machines. One of the virtual machines will run the web application. The other virtual machine will run the web service.

\*Follow the principle of least privilege whenever possible.  
\*Use the minimum amount of administrative effort whenever possible.
