When assessing the internal auditors' competence, the independent CPA should obtain information about
the:
A. Internal auditors' access to records and information that is considered sensitive.
B. Organizational level to which the internal auditors report.
C. Educational background and professional certification of the internal auditors.
D. Policies prohibiting the internal auditors from auditing areas where relatives are employed.
Answer: C
Explanation:
Explanation/Reference:
Explanation:
Choice "B" is correct. When assessing the internal auditors' competence, the auditor should obtain
information about such factors as educational level, experience, professional certification, continuing
education, supervision, review, and evaluation of performance.
Choice "A" is incorrect. The organizational level to which the internal auditors report is related to their
objectivity.
Choice "C" is incorrect. Policies prohibiting internal auditors from auditing areas where relatives are
employed are related to objectivity.

Choice "D" is incorrect. Access to sensitive records and information is related to the overall objectives of the internal audit function, not to internal auditor competence.

Answer: C
Explanation:
Explanation
Scenario:
An Azure Data Factory pipeline must be used to move data from Cosmos DB to SQL Database for Race Central. If the data load takes longer than 20 minutes, configuration changes must be made to Data Factory.
The telemetry data is sent to a MongoDB database. A custom application then moves the data to databases in SQL Server 2017. The telemetry data in MongoDB has more than 500 attributes. The application changes the attribute names when the data is moved to SQL Server 2017.
You can copy data to or from Azure Cosmos DB (SQL API) by using

Azure Data Factory pipeline.
Column mapping applies when copying data from source to sink.
By default, copy activity map source data to sink by column names. You can specify explicit mapping to customize the column mapping based on your need. More specifically, copy activity:
Read the data from source and determine the source schema
* Use default column mapping to map columns by name, or apply explicit column mapping if specified.
* Write the data to sink
* Write the data to sink
