- C. FCAF, high
- D. FCAF, low

Answer: B

NEW QUESTION: 2

Amazon Simple Storage

Service S3, Amazon Simple Storage Service (S3) is a highly available and durable storage service. It is designed to store and retrieve any amount of data from anywhere on the internet. S3 is a RESTful service that uses standard HTTP verbs to perform operations on objects. S3 objects are stored in buckets. Buckets are containers for objects. Each bucket has a unique name and a location. S3 objects are stored in multiple copies across multiple availability zones. This ensures high availability and durability. S3 is a pay-as-you-go service. You only pay for the storage you use. S3 is a highly scalable service. You can store up to 100,000 objects per bucket. S3 is a highly secure service. You can control access to your objects using IAM policies and bucket policies. S3 is a highly compliant service. It is compliant with a wide range of industry standards and regulations.

A. Amazon S3 is a highly available and durable storage service. It is designed to store and retrieve any amount of data from anywhere on the internet. S3 is a RESTful service that uses standard HTTP verbs to perform operations on objects. S3 objects are stored in buckets. Buckets are containers for objects. Each bucket has a unique name and a location. S3 objects are stored in multiple copies across multiple availability zones. This ensures high availability and durability. S3 is a pay-as-you-go service. You only pay for the storage you use. S3 is a highly scalable service. You can store up to 100,000 objects per bucket. S3 is a highly secure service. You can control access to your objects using IAM policies and bucket policies. S3 is a highly compliant service. It is compliant with a wide range of industry standards and regulations.

B. Amazon S3 is a highly available and durable storage service. It is designed to store and retrieve any amount of data from anywhere on the internet. S3 is a RESTful service that uses standard HTTP verbs to perform operations on objects. S3 objects are stored in buckets. Buckets are containers for objects. Each bucket has a unique name and a location. S3 objects are stored in multiple copies across multiple availability zones. This ensures high availability and durability. S3 is a pay-as-you-go service. You only pay for the storage you use. S3 is a highly scalable service. You can store up to 100,000 objects per bucket. S3 is a highly secure service. You can control access to your objects using IAM policies and bucket policies. S3 is a highly compliant service. It is compliant with a wide range of industry standards and regulations.

C. Amazon S3 is a highly available and durable storage service. It is designed to store and retrieve any amount of data from anywhere on the internet. S3 is a RESTful service that uses standard HTTP verbs to perform operations on objects. S3 objects are stored in buckets. Buckets are containers for objects. Each bucket has a unique name and a location. S3 objects are stored in multiple copies across multiple availability zones. This ensures high availability and durability. S3 is a pay-as-you-go service. You only pay for the storage you use. S3 is a highly scalable service. You can store up to 100,000 objects per bucket. S3 is a highly secure service. You can control access to your objects using IAM policies and bucket policies. S3 is a highly compliant service. It is compliant with a wide range of industry standards and regulations.

D. Amazon S3 is a highly available and durable storage service. It is designed to store and retrieve any amount of data from anywhere on the internet. S3 is a RESTful service that uses standard HTTP verbs to perform operations on objects. S3 objects are stored in buckets. Buckets are containers for objects. Each bucket has a unique name and a location. S3 objects are stored in multiple copies across multiple availability zones. This ensures high availability and durability. S3 is a pay-as-you-go service. You only pay for the storage you use. S3 is a highly scalable service. You can store up to 100,000 objects per bucket. S3 is a highly secure service. You can control access to your objects using IAM policies and bucket policies. S3 is a highly compliant service. It is compliant with a wide range of industry standards and regulations.

E. Amazon S3 is a highly available and durable storage service. It is designed to store and retrieve any amount of data from anywhere on the internet. S3 is a RESTful service that uses standard HTTP verbs to perform operations on objects. S3 objects are stored in buckets. Buckets are containers for objects. Each bucket has a unique name and a location. S3 objects are stored in multiple copies across multiple availability zones. This ensures high availability and durability. S3 is a pay-as-you-go service. You only pay for the storage you use. S3 is a highly scalable service. You can store up to 100,000 objects per bucket. S3 is a highly secure service. You can control access to your objects using IAM policies and bucket policies. S3 is a highly compliant service. It is compliant with a wide range of industry standards and regulations.

F. Amazon S3 is a highly available and durable storage service. It is designed to store and retrieve any amount of data from anywhere on the internet. S3 is a RESTful service that uses standard HTTP verbs to perform operations on objects. S3 objects are stored in buckets. Buckets are containers for objects. Each bucket has a unique name and a location. S3 objects are stored in multiple copies across multiple availability zones. This ensures high availability and durability. S3 is a pay-as-you-go service. You only pay for the storage you use. S3 is a highly scalable service. You can store up to 100,000 objects per bucket. S3 is a highly secure service. You can control access to your objects using IAM policies and bucket policies. S3 is a highly compliant service. It is compliant with a wide range of industry standards and regulations.

Answer: C,D,E

NEW QUESTION: 3

If ClusterXL Load Sharing is enabled with state synchronization enabled, what will happen if one member goes down?

A. The processing of all connections handled by the faulty machine is immediately taken over by the other member(s).

B. The processing of all connections handled by the faulty machine is dropped, so all connections need to be re-established through the other machine(s).

C. There is no state synchronization on Load Sharing, only on High Availability.

D. The connections are dropped as Load Sharing does not support High Availability.

Answer: A
